Contents

1	First Section	3
2	Second Section	3
3	Third Section	3
4	Fourth Section	4
	References	5

1 First Section

This document is an example of BibTeX usage for Bibliography Management. Three items are cited: *The L^AT_EX Companion* book [1], the Einstein journal paper [2], and Donald Knuth's website [3]. The L^AT_EX related items are [1, 3]. Another additional citation is [4], which is a book without a title.

2 Second Section

How To Use LaTeX in VS Code

1. No need to install Perl and latexmk.
2. Install LaTeX Workshop VS Code Extension.
3. Install MikTeX on your system.
4. We are good to go ...

3 Third Section

Standard L^AT_EX practice is to write inline math by enclosing it between `\(...\)`:

In physics, the mass-energy equivalence is stated by the equation $E = mc^2$, discovered in 1905 by Albert Einstein.

Instead of writing (enclosing) inline math between `\(...\)` you can use `$...$` to achieve the same result:

In physics, the mass-energy equivalence is stated by the equation $E = mc^2$, discovered in 1905 by Albert Einstein.

Or, you can use `\begin{math}...\end{math}`:

In physics, the mass-energy equivalence is stated by the equation $E = mc^2$, discovered in 1905 by Albert Einstein.

4 Fourth Section

Here are examples of equations:

This requires `\usepackage{amsmath,amssymb}`

$$H_p(q) = -\frac{1}{N} \sum_{i=1}^N y_i \cdot \log_{10}(p(y_i)) + (1 - y_i) \cdot \log_{10}(1 - p(y_i)) \quad (1)$$

$$\chi_{\mathbb{Q}}(x) = \begin{cases} 1 & \text{if } x \in \mathbb{Q} \\ 0 & \text{if } x \in \mathbb{R} \setminus \mathbb{Q} \end{cases} \quad (2)$$

$$\text{Prediction : } \varphi(v) = \begin{cases} 1, & \text{if } v \geq 0 \\ 0, & \text{if } v < 0 \end{cases} \quad (3)$$

$$\text{Forward Propagation : } \sum_{i=0}^m w_i x_i = v = \vec{w} \cdot \vec{x} \quad (4)$$

$$w_1 x_1 + w_2 x_2 + w_0 = 0 \implies x_2 = \frac{-(w_1 x_1 + w_0)}{w_2} \quad (5)$$
